```

After graduating with a degree in Graphic Design from the University of Brighton in June 2017, I joined the advertising and design agency MVad which gave me a chance to use and extend upon the design skills that I had gained whilst at university.
I went on to join the development team as a front-end developer building websites and web page components for companies such as Blade, Vindis, Hatters Furniture and Wilkin and Sons (Tiptree).

Since then I have become a flexible and skilled full stack developer specialising in PHP, Laravel, Node.js (express), Vue.js, Javascript, jQuery, CSS (SASS & LESS) with the ability to see the completion of a website from the start of the project to the live deployment of the website.
